Attention:

Subject: Proposal for design and fabrication of 40" x 40" Vacuum
Easel for use on VG-894 Enlarger, and installation
service.

Gentlemen:

In response to your verbal request, we are pleased to quote the follow-
ing:

One (1) Vacuum Easel for VG-894 Enlarger, in accordance with
 Drawing #D-15997; to include fabrication of easel assembly,
mounting of easel on enlarger, and provision of a suitable vacuum
generator. The price does not include any allowance for royalties for
use of nor does it include any special provisions
for noise suppression of the vacuum generator exhaust noise.

The basic construction will be as illustrated on our drawing. The
proportions of the ball valves will be as suggested in the patent. The
ball valves will be arranged in staggered rows 1/2" on centers both
side-to-side and front to rear.

Two industrial type vacuum cleaners are to be supplied
to generate the required vacuum displacement and pressure differential.

The top surface of the easel is to be perforated steel sheet, .086" diam.
holes on 9/64" staggered centers, and finished with a matte white
surface. The top of the easel assembly is to be held flat within .008"
total indicator reading. The steel surface will permit the use of
magnetic paper locating devices. Installation includes adapting the
three existing levelling jacks on the enlarger; levelling the easel with
the enlarger bed; connecting the vacuum hoses to the easel and the

vacuum generators; and checking the units out after installation.

The price for the first unit is installed. This is made up of for materials and purchased parts, and 210 hours of manufacturing and installation labor.

STATINTL

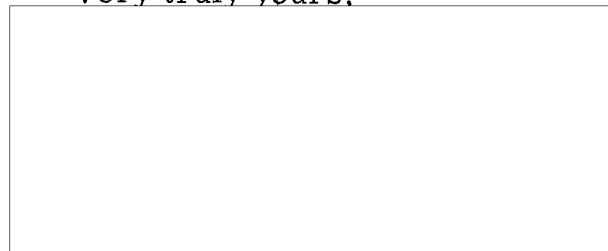

Delivery of this unit could be made in approximately 110 days under present schedules.

Terms are less 1% for 10-day payment; 1/2 of 1%, 20-day; net 30-day.

We trust this proposal is satisfactory in all respects. If you need further details, please advise.
